

FinInteract Framework

1. Construct ambiguous instances

Data sources

SEC or EDGAR

A-share annual reports

FinInteract instance

Q	Ambiguous financial question
C	Disambiguating context
A	Intended answer
D	Default answer

Five ambiguity axes

Entity scope

Metric definition

Temporal scope

Filing vintage

Recognition policy

173 bilingual instances (EN / ZH)

2. Verify instance quality

Constructor
Generate Q, C, A, D

Sanity checks
Company named, inline ambiguity,
and answer difference

Adversarial verifier
Answer Q without C

Expert validation
Ambiguity, correctness and aligning
to commonly accepted standard

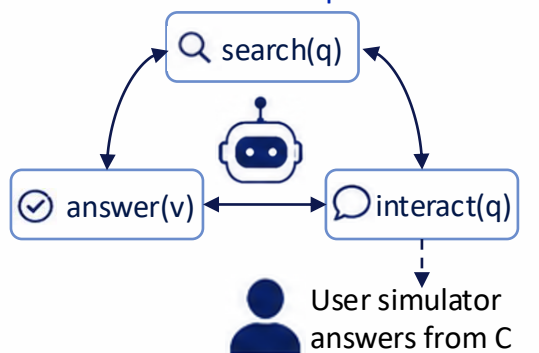

Keeps only hard, valid and
non-trivial instances

3. Evaluate the agent

Input

Ambiguous question and filing passage

ReAct loop

Evaluation modes

Answer-only

Search

Interact

Axis-Aware ReAct

4. Score and diagnose

Primary metric

Accuracy on intended interpretation

Single-gold check

Intended
accuracy

vs

Default
capture rate

reveals the single-gold illusion

Interaction quality
